

The KNOT

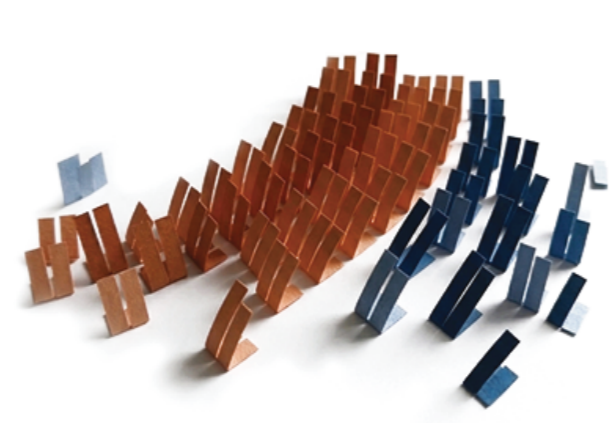

Fluidity

The ability of a space or form to flow naturally, without rigid boundaries. It suggests smooth transitions, adaptability, and a continuous sense of movement.

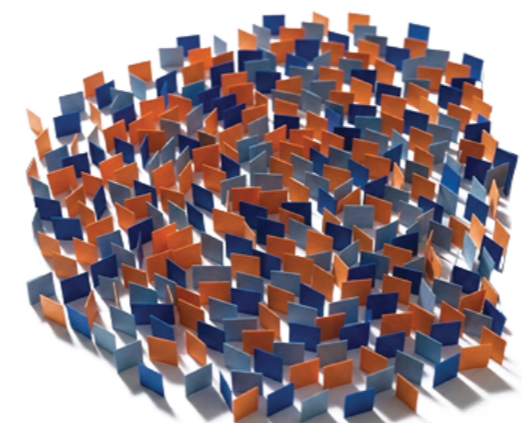

Dynamism

A quality of energy and constant motion embedded in design or composition. It expresses tension, direction, and a sense that something is always evolving or in action.

Unity

The principle of bringing different elements together into a coherent, harmonious whole. It reflects balance and the idea that every part belongs and contributes to a single vision.

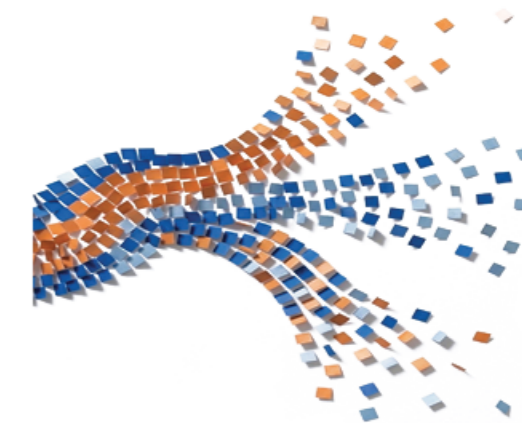

Diversity

The coexistence of multiple forms, identities, or perspectives within one system. It celebrates difference as a strength and recognizes that variety creates richness and resilience.

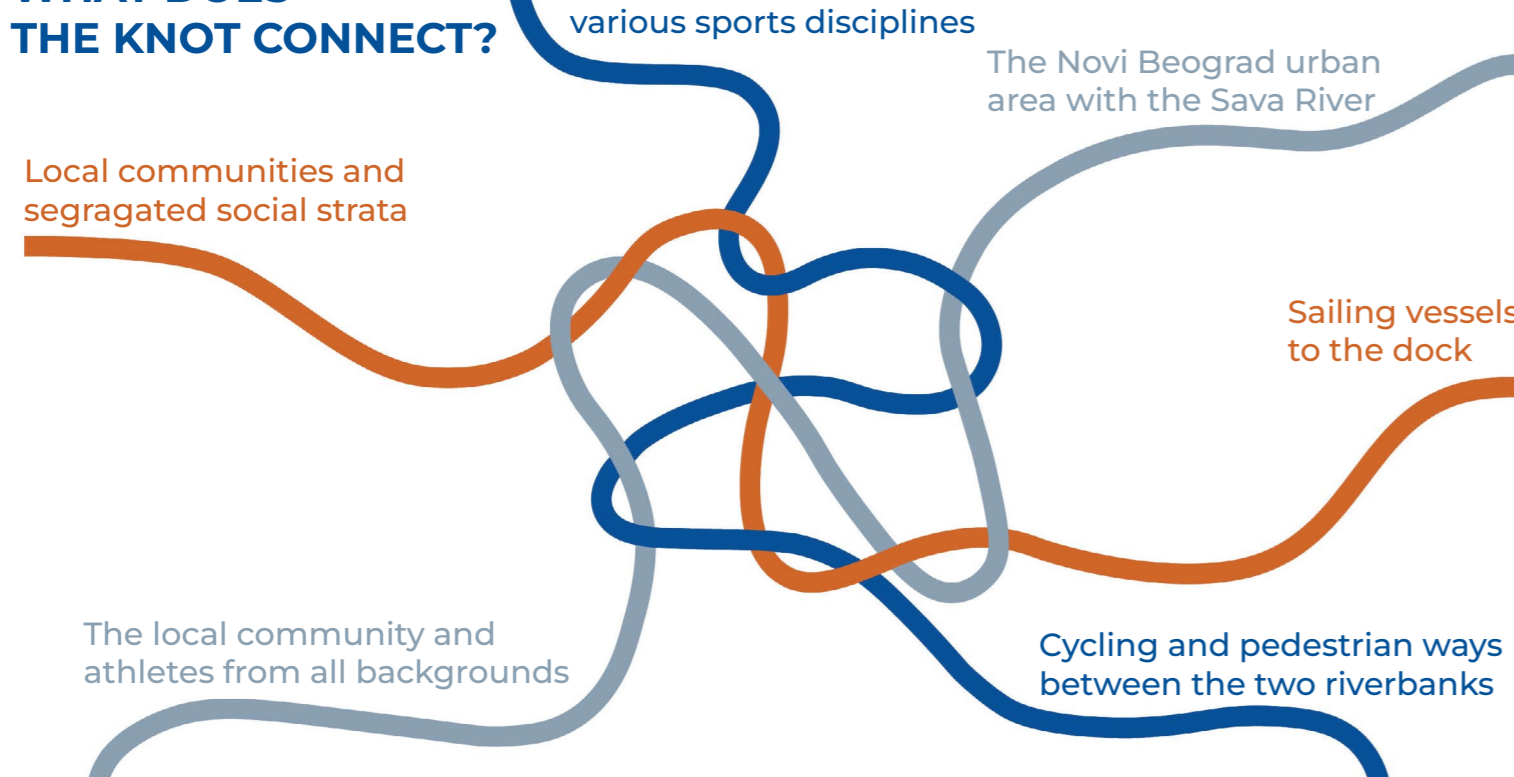

Open-Ending

A deliberate absence of a fixed conclusion, leaving room for interpretation and continuation. It invites the viewer or user to project their own meaning onto the experience.

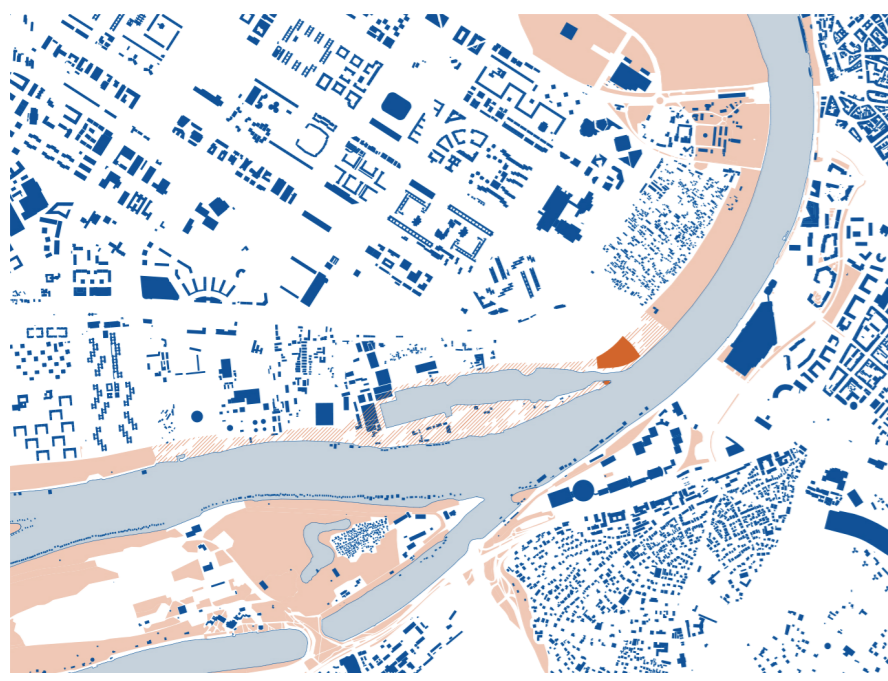

KNOT

WHAT DOES THE KNOT CONNECT?

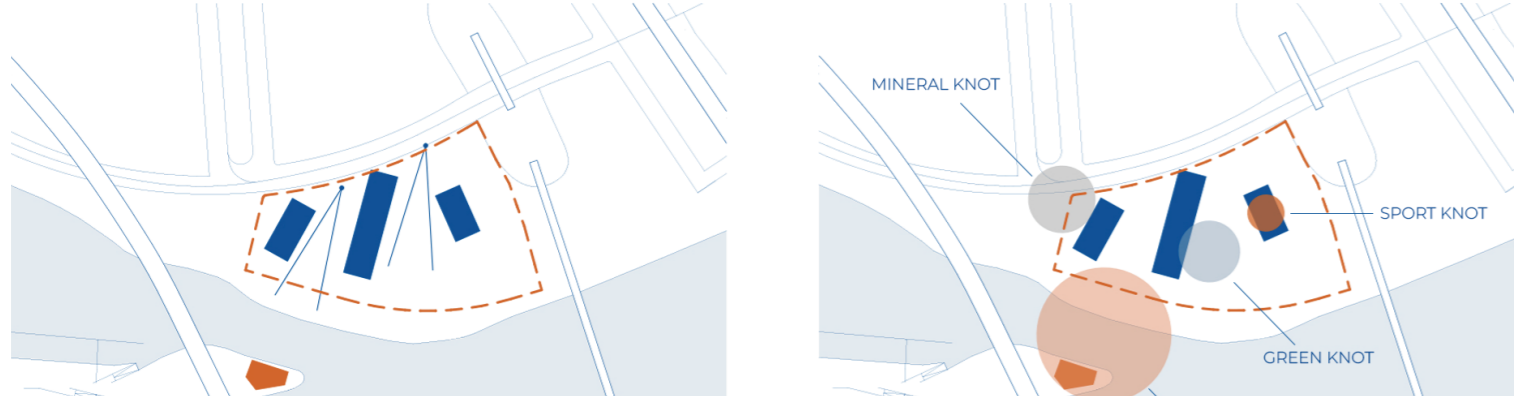

GREEN CORRIDOR

The green corridor on the northern bank of the Sava is interrupted in the vicinity of the site, extending it would provide urban coherence while also enhancing local biodiversity.

Furthermore, a lack of consideration for the natural landscape is evident in the contemporary developments on the opposite bank.

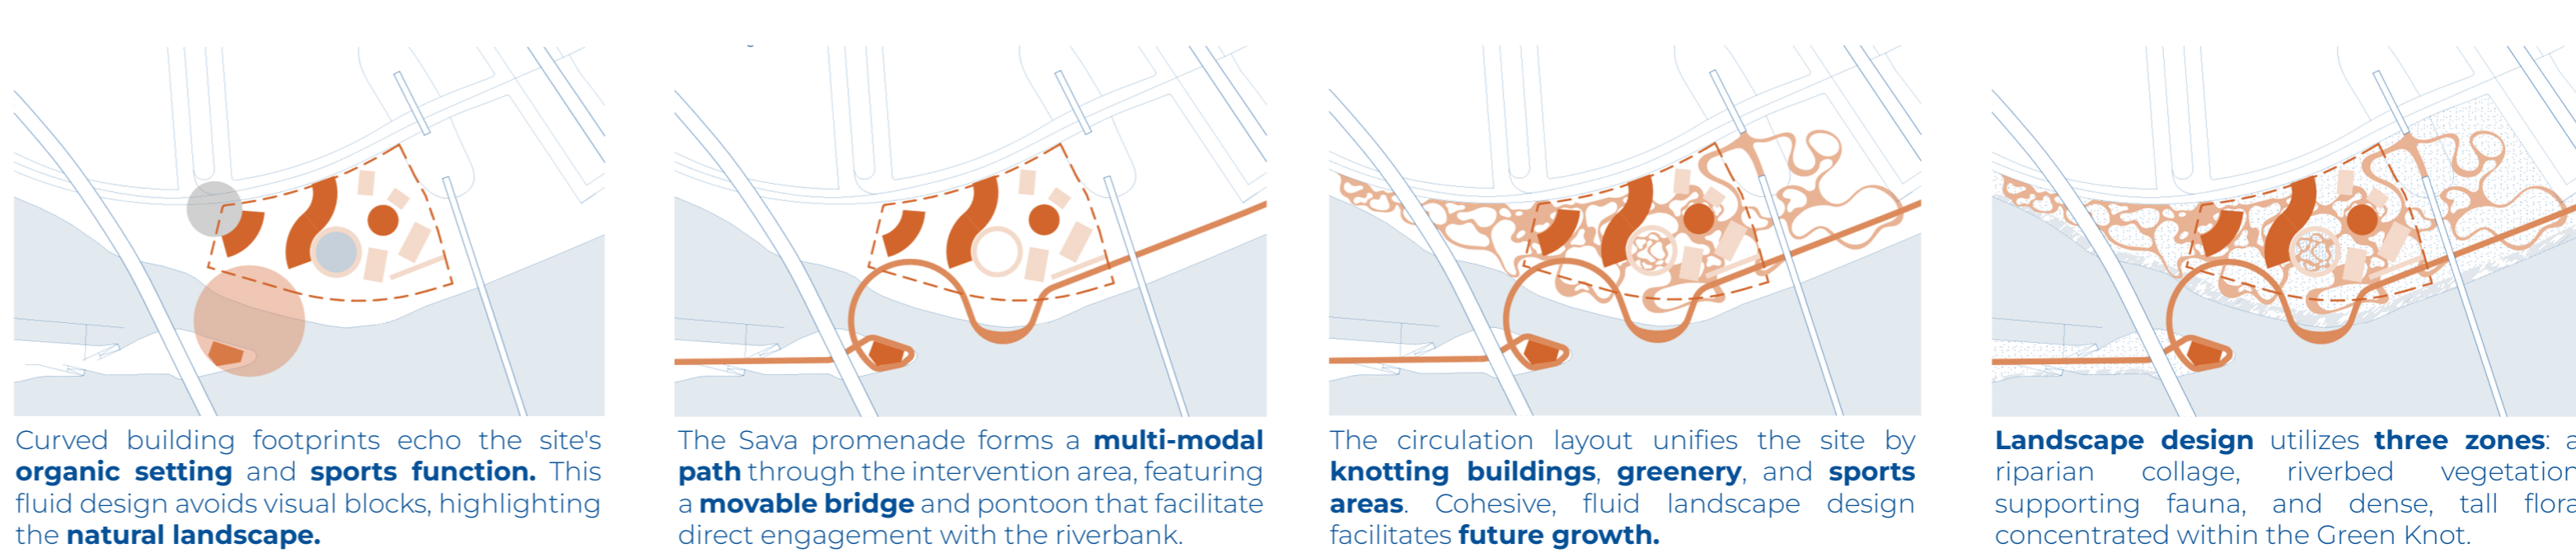

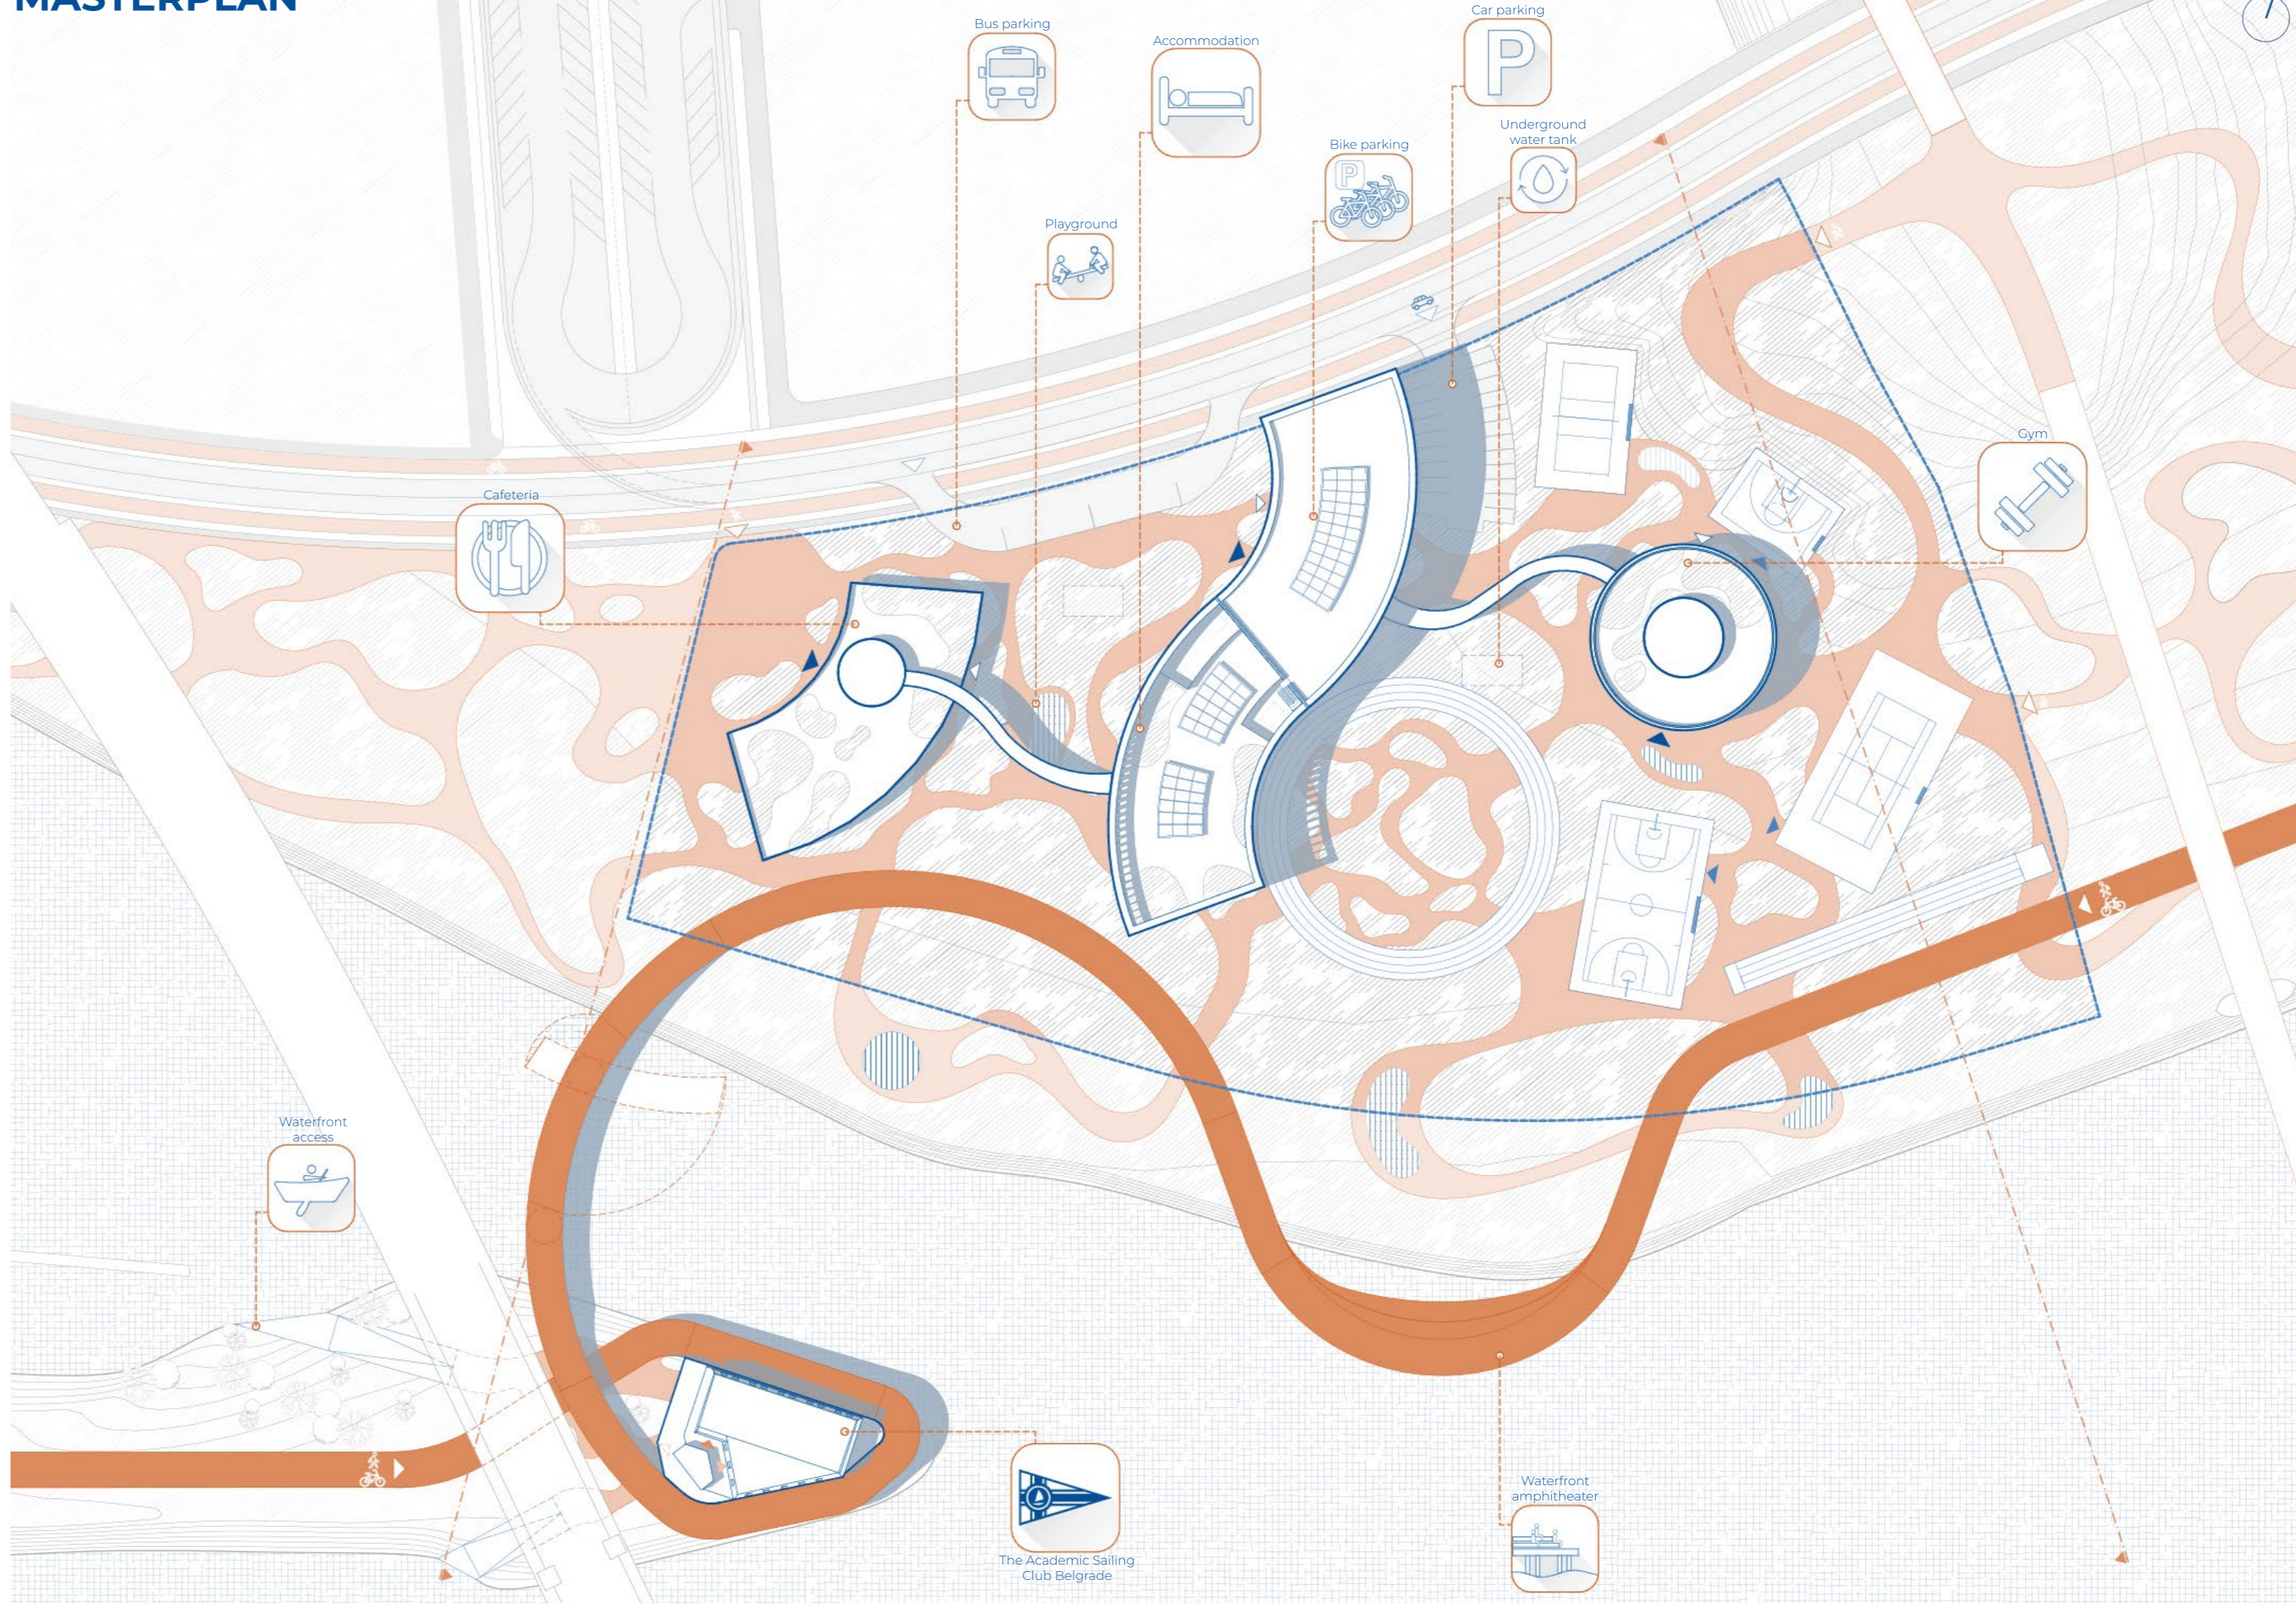

CONCEPT MATERIALIZATION

Volumetric placement avoids city-water barriers, instead establishing visual corridors and pedestrian pathways toward the promenade and yachting club.

The KNOT concept integrates four hubs: Mineral, Sport, Green, and Synthesis into an urban mode, linking public space, athletics, and the waterfront.
